

■ accessories Cleaner #1417

Product description

Diamond Cleaner is used to prepare or degrease and clean surfaces to ensure optimum adhesion of metal polymers. Oils, grease and other contaminants are reliably removed from metals, plastics and other surfaces.

Characteristics

- Silicone-free
- Evaporates quickly and leaves no residue
- Does not attack sensitive surfaces

Chemical resistance

For questions about chemical resistance please contact our technicians

Pack sizes

Article

1 Liter

Description

500ml spray

Custom sizes on request.

Storage / Shelf life

Store in the original, unopened container in a dry, cool and frost-free place (5°C-+20°C). Shelf life 2 years. Protect from direct sunlight. Higher temperatures reduce shelf life.

Application

Spray the component to be cleaned from top to bottom with cleaner over as large an area as possible. Contaminants run off downwards. Residual contamination can simply be wiped off. If particularly stubborn contamination cannot be removed directly, spray the area in question again generously with cleaner and then wipe off with a clean, lint-free cloth. Repeat this process until the soiling has been completely removed.

Disposal

Unused residual material from the cans, if mixed in the correct mixing ratio and completely cured, can be disposed of normally (EAKV 170203). Unmixed material must be disposed of as chemical waste (EAKV 080111). When booking the Diamant service team, waste will be disposed of by us.

Further information can be found in the service data sheet.

Safety Data Sheet

Please read the corresponding safety data sheet before processing the product. Safety data sheets are available on a daily basis upon request via info@diamant-polymer.de or by phone +49-2166-98360.

DIAMANT guarantees the product properties as long as they are stored and used according to the specifications listed here. DIAMANT does not assume any responsibility for the processing of the material. For further questions please contact our technicians.
